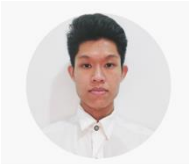
Edwaldo Utama

Senior Full-Stack Software Engineer | Backend & Platform Focus



Jakarta, ID 11510 | +62 821-7614-4111
edwaldo.utama@gmail.com | http://linkedin.com/in/edwaldo-utama | https://github.com/edwaldo12

Senior Full-Stack Software Engineer with 7+ years of experience building scalable web applications, backend systems, and internal platforms. Strong in Golang, Node.js, TypeScript, React.js, Next.js, Laravel, and cloud-native infrastructure, with hands-on experience in microservices, Kubernetes, CI/CD, monitoring, and system optimization. Experienced in leading technical execution while actively contributing across frontend, backend, and infrastructure to deliver reliable, maintainable, and business-focused software.

EXPERIENCES

Full Time | PT. Digital Rox Indonesia **Jakarta, Indonesia**
Senior Software Engineer *Dec 2025 - Now*

- Improved infrastructure reliability for core business services by optimizing deployment configuration, resource allocation, and monitoring, helping critical services meet P99 response-time targets.
- Designed and deployed an internal proxy payment gateway within K8S, restricting access exclusively to internal services for enhanced security.
- Led and contributed to Admin v2 development, coordinating team execution and building core workflow automation features that reduced manual processing time by 90%.
- Set up and maintained development and production infrastructure, including RabbitMQ, VPS, VPN, and monitoring tools, while contributing to core feature development with the engineering team.
- Reduced monthly infrastructure costs by over 70% through resource optimization, service consolidation, and architecture improvements.
- Led and contributed to the re-architecture of key monolithic modules into loosely coupled services, improving maintainability and enabling parallel team development.
- Set up centralized monitoring and logging (Grafana, Prometheus) for both engineering and business teams to ensure system reliability and observability.
- Spearheaded the migration of key backend modules from Node.js to Golang, coordinating implementation with the team and improving system maintainability.
- Shipped a new system feature that contributed to a 15% increase in company revenue.
- Implemented GitHub Actions and ArgoCD-based deployment workflows, automating build and deployment processes to reduce release friction for the engineering team.
- Built an AI customer-support agent using LangChain/LangGraph ReAct, integrated with Chatwoot to replace a paid third-party solution and handle FAQ responses, order lookups, and payment checks

Tech Stack: Golang, TypeScript, Python, Gin, Node.js, Django, PostgreSQL, Redis, BullMQ, Message Broker (RabbitMQ), JWT, WebSocket, Microservices, React.js, Next.js, Langchain, LangGraph, FAISS, RAG, Kubernetes, Docker, Helm, ArgoCD, Nginx, GCP, AWS, Alibaba, Wireguard VPN, CI/CD, Grafana, Prometheus, Google Analytics, Microsoft Clarity, Git.

Full Time | PT. BFI Finance Indonesia Tbk **Jakarta, Indonesia**
Software Engineer *May 2025 – Dec 2025*

- Built loan status tracking system (Reschedule history, Appointment scheduling, etc) integrated with Goto, Tokopedia, Shopee and more.
- Engineered an event-driven architecture for the loan re-scheduling flow, focusing on status tracking history and validation. This resulted in reducing latency from 5 seconds to under 0.5 seconds (measured at P95), while also enhancing readability and maintainability.

- Implemented RabbitMQ validation pipeline with dead-letter queues/retry mechanism, isolating transactional/webhook flows and decoupling heavy work for better processing.
- Eliminated duplicate processing via Redis idempotency control in webhook flows.
- Accelerated high-traffic endpoints through in-memory caching, reducing database roundtrips.
- Enhanced legacy validation with Slack/GWS (Google Web Server) notifications for real-time error alerts.
- Achieved more than 95% unit test coverage (Sonarqube verified) for critical services
- Implemented SOLID/Clean Architecture with strict layer separation.
- Created partner-facing error helper system improving integration debugging.
- Collaborated closely with the QA team members during the integration of services with external partners (e.g., Goto, Shopee, etc.).
- Collaborated closely with the tech lead to identify and define key cases, fostering collaborative brainstorming sessions to develop effective solutions.
- Built an event-driven, distributed e-signature platform that digitized field-survey workflows, reduced loan-disbursement time from ~1 day to minutes, and ensured a complete compliance audit trail.

Tech Stack: Golang, Solid.JS, Typescript, Git, Microservices, JWT, PostgreSQL, Message Broker (RabbitMQ, NATS), GCP, GWS, Redis, K8S, Grpc, Datadog, Temporal, ArrrangoDB

Full Time | PT. Amani Group **Jakarta, Indonesia**
Software Engineer Team Lead *Apr 2024 – May 2025*

- Developed and maintained key features, including Master-Material, Real Estate Management, Customer Relationship Management, and modules for Contractors and Home-Buyers.
- Led continuous upgrades to enhance overall functionality and user experience of the application.
- Collaborated in daily Agile SDLC meetings, implementing design patterns tailored to specific use cases.
- Contributed to system architecture discussions and design system improvements to ensure optimal performance.
- Migrated legacy code and optimized the existing CRM solution, overseeing performance monitoring and fine-tuning.
- Coordinated with C-level executives to align program objectives and ensure smooth business operations.
- Led projects by driving strategic direction, mentoring junior team members, facilitating effective collaboration, and performing comprehensive code reviews.
- Developed and integrated a robust message broker to ensure seamless connectivity between services, utilizing a structured service-oriented database design and real-time socket communication.
- Employed Atomic Design principles and implemented key performance optimizations to enhance the efficiency and scalability of Next.js and React applications.
- Collaborated closely with UI/UX teams and Solutions Architects to ensure flawless system integration and an exceptional user experience.
- Maintained comprehensive documentation for all implemented features, bug fixes, and maintenance tasks, supporting continuous improvement and team knowledge sharing.

Tech Stack: Golang, Next.js, Nest.js, Express, React.js, Typescript, Git, Microservices, JWT, AXIOS, Redux, PostgreSQL, Message Broker (RabbitMQ), GCP, Redis, Atomic Architecture, Websocket, Xendit

Full Time | PT. CIMB Niaga **Jakarta, Indonesia**
Software Engineer *Aug 2023 – Apr 2024*

- Developed and maintained key features such as budget management and task delegation in IProC, based on Functional Specification Documents (FSD) and user requests, ensuring efficient and user-friendly solutions.
- Integrated third-party APIs to consume data from pengadaan.com.
- Refactored deprecated code, updated libraries, and upgraded the framework.
- Analyzed and implemented business procurement workflows.
- Managed big data, optimizing and tuning SQL queries.

- Actively participated in an Agile environment with a small team.
- Successfully collaborated with the team to complete Phase 2b of the project.
- Documented all implemented features, bug fixes, and maintenance tasks.

Tech Stack: PHP, CodeIgniter(4), CSS, Bootstrap, ReactJS, Typescript, MySQL, SQL Server, Express JS, Git, Jquery, Git, Redux, Microservices, Message Broker (NATS).

Full Time | PT Intellix Global Crossing **Jakarta, Indonesia**
Software Engineer *May 2022 – June 2023*

- Engineered and optimized robust features, significantly elevating the performance and security of platforms for esteemed clients, including BRI Danareksa Sekuritas, Bank Mega Syariah, and Bank Sampoerna.
- Successfully refined and executed SQL tuning strategies for databases handling in excess of 5 million records, significantly boosting performance and scalability.
- Spearheaded comprehensive penetration testing.
- Fully Participated in SCRUM, adeptly managing concurrent project timelines and fostering collaborative synergy across teams.
- Forged strong alliances with the Engineering, Project Management, and Quality Control teams, consistently resolving issues and advancing project objectives.
- Instrumental in cross-team collaboration, enhancing product features, and troubleshooting complex technical challenges.
- Pioneered the migration of legacy tools and updating of PHP and Node.js versions for client applications, resulting in smoother operations and modernized infrastructures.
- Innovatively integrated the Jatis API for WhatsApp Blast and LDAP into the Ecentrix Application for Bank Mega Syariah, significantly enhancing the Contact Center's capabilities.
- Authored comprehensive documentation for newly developed features, laying the groundwork for seamless future enhancements and maintenance.

Tech Stack: NodeJS, Express, ReactJS, PHP, CodeIgniter (3, 4), MongoDB, MySQL, PostgreSQL, Redis, JavaScript, jQuery, Git, HTML, CSS, SCSS, Webpack.

Self Employed | Software Engineer Freelancer **Palembang, Indonesia**
Software Engineer *2019 - 2022*

- Developed over 10 custom web applications, meeting unique client needs and boosting user interaction.
- Managed ongoing upgrades to enhance web app functionality and user experience.
- Delivered custom training to users, improving their proficiency with our applications.

Tech Stack: HTML, CSS, Bootstrap, JavaScript, Express JS, PHP, Laravel, MySQL, ReactJS, Git.

Internship | PT Sinar-Sanata Electronic Industry **Palembang, Indonesia**
Software Engineer *Jan 2020 - Aug 2020*

- Developed a user-friendly online store app for product display and an admin tool for stock tracking.
- Designed system architecture and database structures.
- Collaborated closely with team members on project execution.
- Conducted user training for application adoption and proficiency.

Tech Stack: PHP, Laravel, CSS, Bootstrap, MySQL, Git.

Internship | Smart Integrated System **Palembang, Indonesia**
Software Engineer *2019 - 2020*

- Developed and implemented software solution based on client requirements
- Responsible for developing REST API for mobile app on android platform
- Delivered hands-on technical training to users.

Tech Stack: PHP, CodeIgniter, Laravel, ReactJS, MySQL, Git.

Freelance | Cyborg IT Center **Palembang, Indonesia**
Software Engineer *2019 - 2020*

- Developed and implemented software solution for athlete client tracking score.
- Responsible for developing REST API for mobile app on android platform
- Providing technical training to end users.

Tech Stack: HTML, CSS, JavaScript, PHP, CodeIgniter, MySQL.

EDUCATION

UNIVERSITAS MULTI DATA PALEMBANG **Palembang, Indonesia**
Bachelor's in Computer Science, *2018-2022*
GPA: 3.84 / 4.00
Final Project : Classification Mediterranean Fishes Using Convolutional Neural Network,
Organizations:

- Web Programming Community (*2020-2022*).
- Associate Of Informatics Engineering (2020-2022).
- Buddhist Organization (2018-2022).
